(54) WIRELESS AUDIO EQUIPMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To reduce load on a user and to ensure feasibility concerning the high degree of freedom in arrangement and the arrangement of audio equipment.

SOLUTION: A user channel (radio channel) is set between a present unit (a main body unit 20 or a speaker unit 30, for example), comprising a wireless component 11 and the other unit (the speaker unit 30 or main body unit 20, for example), and through this user channel, data are transferred between the units. In this case, the band of the user channel is set corresponding to at least one of the contents of data to be transferred, the class of the opposite unit and the idle conditions of radio resources.
